## ***Abstract***

The present study aims to investigate some of the hormonal ,biochemical ,and haematological alteration that accompanied untreated patients with (PTB) and the side effects of antituberculosis drugs with directed observed treatment short course (DOTS). This study was carried out at the Consultation Clinic for Respiratory and Chest Diseases laboratory , the feminine and children teaching hospital laboratories and public health laboratory in Al-Muthanna province, during the period extended from 16/10/2015 to 12/ 8/2016.

Tow hundred women (aged between 21-60 years) were included in the present study , 100 of them suffer from pulmonary tuberculosis , were examined before treatment , after two months , and after six months of treatment, whereas the resting 100 women were apparently healthy and served as control group .The present study indicates high percentage of PTB infection in age group (51-60) especially in the rural areas (72%) which reported a significant higher ( $P<0.05$ ) Percentage compared with 28% in the urban areas. The results of (T4) and (T3) hormones revealed significant decrease ( $P<0.05$ ) in the patients after 2 and 6 months of treatment in comparison with control group. In comparison between treatment periods, T4 and T3 levels decreased significantly as treatment period prolonged. Significant decrease( $P<0.05$ ) of (EPO) levels was shown in patients before treatment compared with control. TC, TG, HDL and LDL concentration revealed significant lower levels in patients before treatment compared with control. While the results show significant increase in ALT and AST of after treatment compared with before treatment and control group. Significant decrease ( $P<0.05$ ) of RBCs and Hb levels were shown in patients before treatment compared with control. While significant increase( $P<0.05$ ) of WBCs was shown in patients before treatment compared with control. From this study we conclude the rate of infection PTB increases with progress the age especially in rural areas and there are great side effect of antituberculosis drugs on thyroid gland and hepatocytes.

# List of contents

Title		Page
Abstract		I
List of contents		II
List of Tables		V
List of Figures		V
List of abbreviation		VI
<b>Chapter One: Introduction</b>		
1.1	Introduction	1
1.2	Aims of the study	3
<b>Chapter Two: Literature Review</b>		
2.1	Pulmonary tuberculosis	4
2.2	Historical view about Pulmonary tuberculosis	5
2.3	Epidemiology of Pulmonary tuberculosis	6
2.4	Pathophysiological of pulmonary tuberculosis and immune response	7
2.5	Sings and symptoms of pulmonary tuberculosis	9
2.6	Diagnosis of pulmonary tuberculosis	10
2.7	Treatment of pulmonary tuberculosis	10
2.7.1	Directed Observed Treatment Short course	11
2.7.1.1	Isoniazid	12
2.7.1.2	Rifampicin	13
2.7.1.3	Ethambutol	15
2.7.1.4	Pyrazinamide	16
2.7.1.5	Streptomycin	17
2.8	Hormonal parameters	18
2.8.1	Thyroid stimulating hormone and Thyroid hormones	18
2.8.2	Erythropoietin hormone	20
2.9	Biochemical parameters	21
2.9.1	Cholesterol	21
2.9.2	Triglyceride	22

2.9.3	Lipoproteins	23
2.9.4	Liver enzymes	24
2.10	Haematological parameters	25
2.10.1	Red Blood Cells	25
2.10.2	Haemoglobin	25
2.10.3	White Blood Cells	26

### **Chapter Three : Materials and Methods**

3.1	Materials	28
3.1.1	Hormonal and biochemical kits	28
3.1.2	Equipments and instruments	28
3.2	Subjects of study	30
3.3	Study design	31
3.4	Blood sample collection	32
3.5	Methods	32
3.5.1	Assessment of Hormonal parameters	32
3.5.1.1	Assessment of the levels of thyroid stimulating hormone , tetraiodothyronine and triiodothyronine hormones	32
3.5.1.2	Assessment of the level of erythropoietin hormone	34
3.5.2	Assessment of Biochemical parameters	36
3.5.2.1	Assessment of total Cholesterol (TC)	36
3.5.2.2	Assessment of Triglyceride(TG)	38
3.5.2.3	Assessment of High Density Lipoprotein-Cholesterol	40
	Calculation of LDL-Cholesterol	41
3.5.2.4	Assessment of Alanine aminotransferase (ALT)	41
3.5.2.5	Assessment of Aspartate aminotransferase (AST)	42
3.5.3	Assessment of Haematological parameters	43
3.6	Statistical analysis	44

### **Chapter Four :Results and Discussion**

4.1	Effect of age on infection with Pulmonary tuberculosis	45
4.2	Effect of location on infection with Pulmonary tuberculosis	46

4.3	Effect of pulmonary tuberculosis and antituberculosis drugs on some hormonal parameters (TSH, T4, T3 and EPO)	48
4.4	Effect of pulmonary tuberculosis and antituberculosis drugs on some biochemical parameters	54
4.4.1	Lipids profile (TC,TG,HDL and LDL)	54
4.4.2	Liver enzymes (ALT and AST)	60
4.5	Effect of pulmonary tuberculosis and antituberculosis drugs on some haematological parameters(RBC, Hb and WBC)	62
<b>Chapter Five: Conclusion and Recommendations</b>		
5.1	<b>Conclusion</b>	67
5.2	<b>Recommendations</b>	67
	<b>References</b>	68
	<b>Appendix</b>	91

### List of Tables

Table No.	Title	Page
2.1	Dosage of antituberculosis according to weight	11
3.1	Hormonal and Biochemical kits and their suppliers and sources	28
3.2	The equipments used in the study and their supplier and sources	29
3.3	Instruments used in the study and their suppliers and sources	29
4.1	The change in some hormonal parameters of patients as compared with control group	49
4.2	The change in some lipids levels of patients as compared with control group	54
4.3	The change in ALT and AST levels of patients as compared with control group	60
4.4	The change in some haematological parameters of patients as compared with control group	63

## List of Figures

Figures No.	Title	Page
2.1	Chemical structure of Isoniazid	13
2.2	Chemical structure of Rifampicin	14
2.3	Chemical structure of Ethambutol	16
2.4	Chemical structure of Pyrazinamide	17
2.5	Chemical structure of Streptomycin	18
2.6	Regulation of thyroid secretion	20
3.1	A digram showing the study design	31
4.1	The relative of pulmonary tuberculosis infection with the age	46
4.2	Infection cases distribution by location	47
4.3	Comparison of some hormonal parameters between Patients before and after treatment	50
4.4	Comparison of EPO levels between patients before and after treatment	51
4.5	Comparison of some lipids levels between patients before and after treatment	55
4.6	Comparison of ALT and AST levels between patients before and after treatment	61
4.7	Comparison of some haematological parameters between patients before and after treatment	64

## List of Abbreviations

ALT	Alanine amino Transferase
AST	Aspartate amino Transferase
DI	Deciliter
DNA	Deoxy ribonucleic acid
DOTS	Directly Observed Treatment Short course
EDTA	Ethylene diamine tetra acetic acid
ELISA	Enzyme Linked Immune Sorbent Assay
EMB	Ethambutol
EMRO	Eastern Mediterranean Region Organization
EPO	Erythropoietin
G	Gram

GPT	Glutamate Pyruvate Transaminase
GOT	Glutamate Oxaloacetate Transaminase
Hb	Haemoglobin
HDL	High Density Lipoprotein
HIV	Human Immunodeficiency Virus
HL	Hepatic lipase
HRP	Horseradish Peroxidase
IL	Interleukin
INH	Isoniazid
INF	Interferon
IU	International unit
Kg	Kilogram
L	Liter
LDL	Low Density Lipoprotein
LPL	Lipoprotein lipase
µg	Microgram
Mg	milligram
Min	minute
µL	Microliter
ml	milliliter
µmol	Micromole
<i>M.tb</i>	<i>Mycobacterium tuberculosis</i>
Ng	nanogram
NTP	National Tuberculosis control Program
PAP	4-amino antipyrine
Pg	Picogram
PTB	Pulmonary Tuberculosis
R	Reagent
RBCs	Red Blood Cells
RIF	Rifampicin
RNA	Ribo nucleic acid
Rpm	Round per minute

T3	Triiodothyronine hormone
T4	Tetraiodothyronine hormone or Thyroxine
TB	Tuberculosis
TC	Total Cholesterol
TG	Triglyceride
TRH	Thyrotropin Releasing Hormone
TSH	Thyroid Stimulating Hormone
TNF	Tumor necrosis factor
U/L	Unit per Liter
VLDL	Very low Density Lipoprotein
WBCs	White Blood Cells
WHO	World Health Organization
